

Galaxy Structural Properties and Star-Formation Histories with 3D-DASH

Sam Cutler, Lamiya Mowla, Kate Whitaker, Gabe Brammer, Iva Momcheva, Pieter van Dokkum, and the 3D-DASH Team

COSMOS2022 Meeting - July 12th 2022

3D-DASH: The Widest Near-Infrared Hubble Space Telescope Survey

LAMIYA A. MOWLA,¹ SAM E. CUTLER,² GABRIEL B. BRAMMER,^{3,4} IVELINA G. MOMCHEVA,⁵ KATHERINE E. WHITAKER,^{2,3}

Wide-Field Near-IR Imaging from 3D-DASH

Difficult to achieve with HST (especially in NIR)

Already done from the ground!

Not with HST (NIR)...

| VISTA survey observing strategies | | | |
|-----------------------------------|--------------------------|--|---|
| Survey | Area (deg ²) | Filters and Depth Measure (mag (10 σ , AB)) | Depth (mag) |
| Ultra-VISTA | 0.73 (ultra-deep) | 5 σ , AB | Y=26.7 J=26.6 H=26.1 K _s =25.6 NB=26.0 |
| VIKING | 1500 | 5 σ , AB | Z=23.1 Y=22.3 J=22.1 H=21.5 K _s =21.2 |
| VMC | 184 | 10 σ , Vega | Y=21.9 J=21.4 K _s =20.3 |
| VVV | 520 | 5 σ , Vega | Z=21.9 Y=21.2 J=20.2 H=18.2 K _s =18.1 |
| VHS | 20 000 | 5 σ , AB | Y=21.2 J=21.2 H=20.6 K _s =20.0 |
| VIDEO | 12 | 5 σ , AB | Z=25.7 Y=24.6 J=24.5 H=24.0 K _s =23.5 |

Wide-Field Near-IR Imaging from 3D-DASH

Drift and SHift solves this problem

Iva Momcheva, 3D-DASH Team

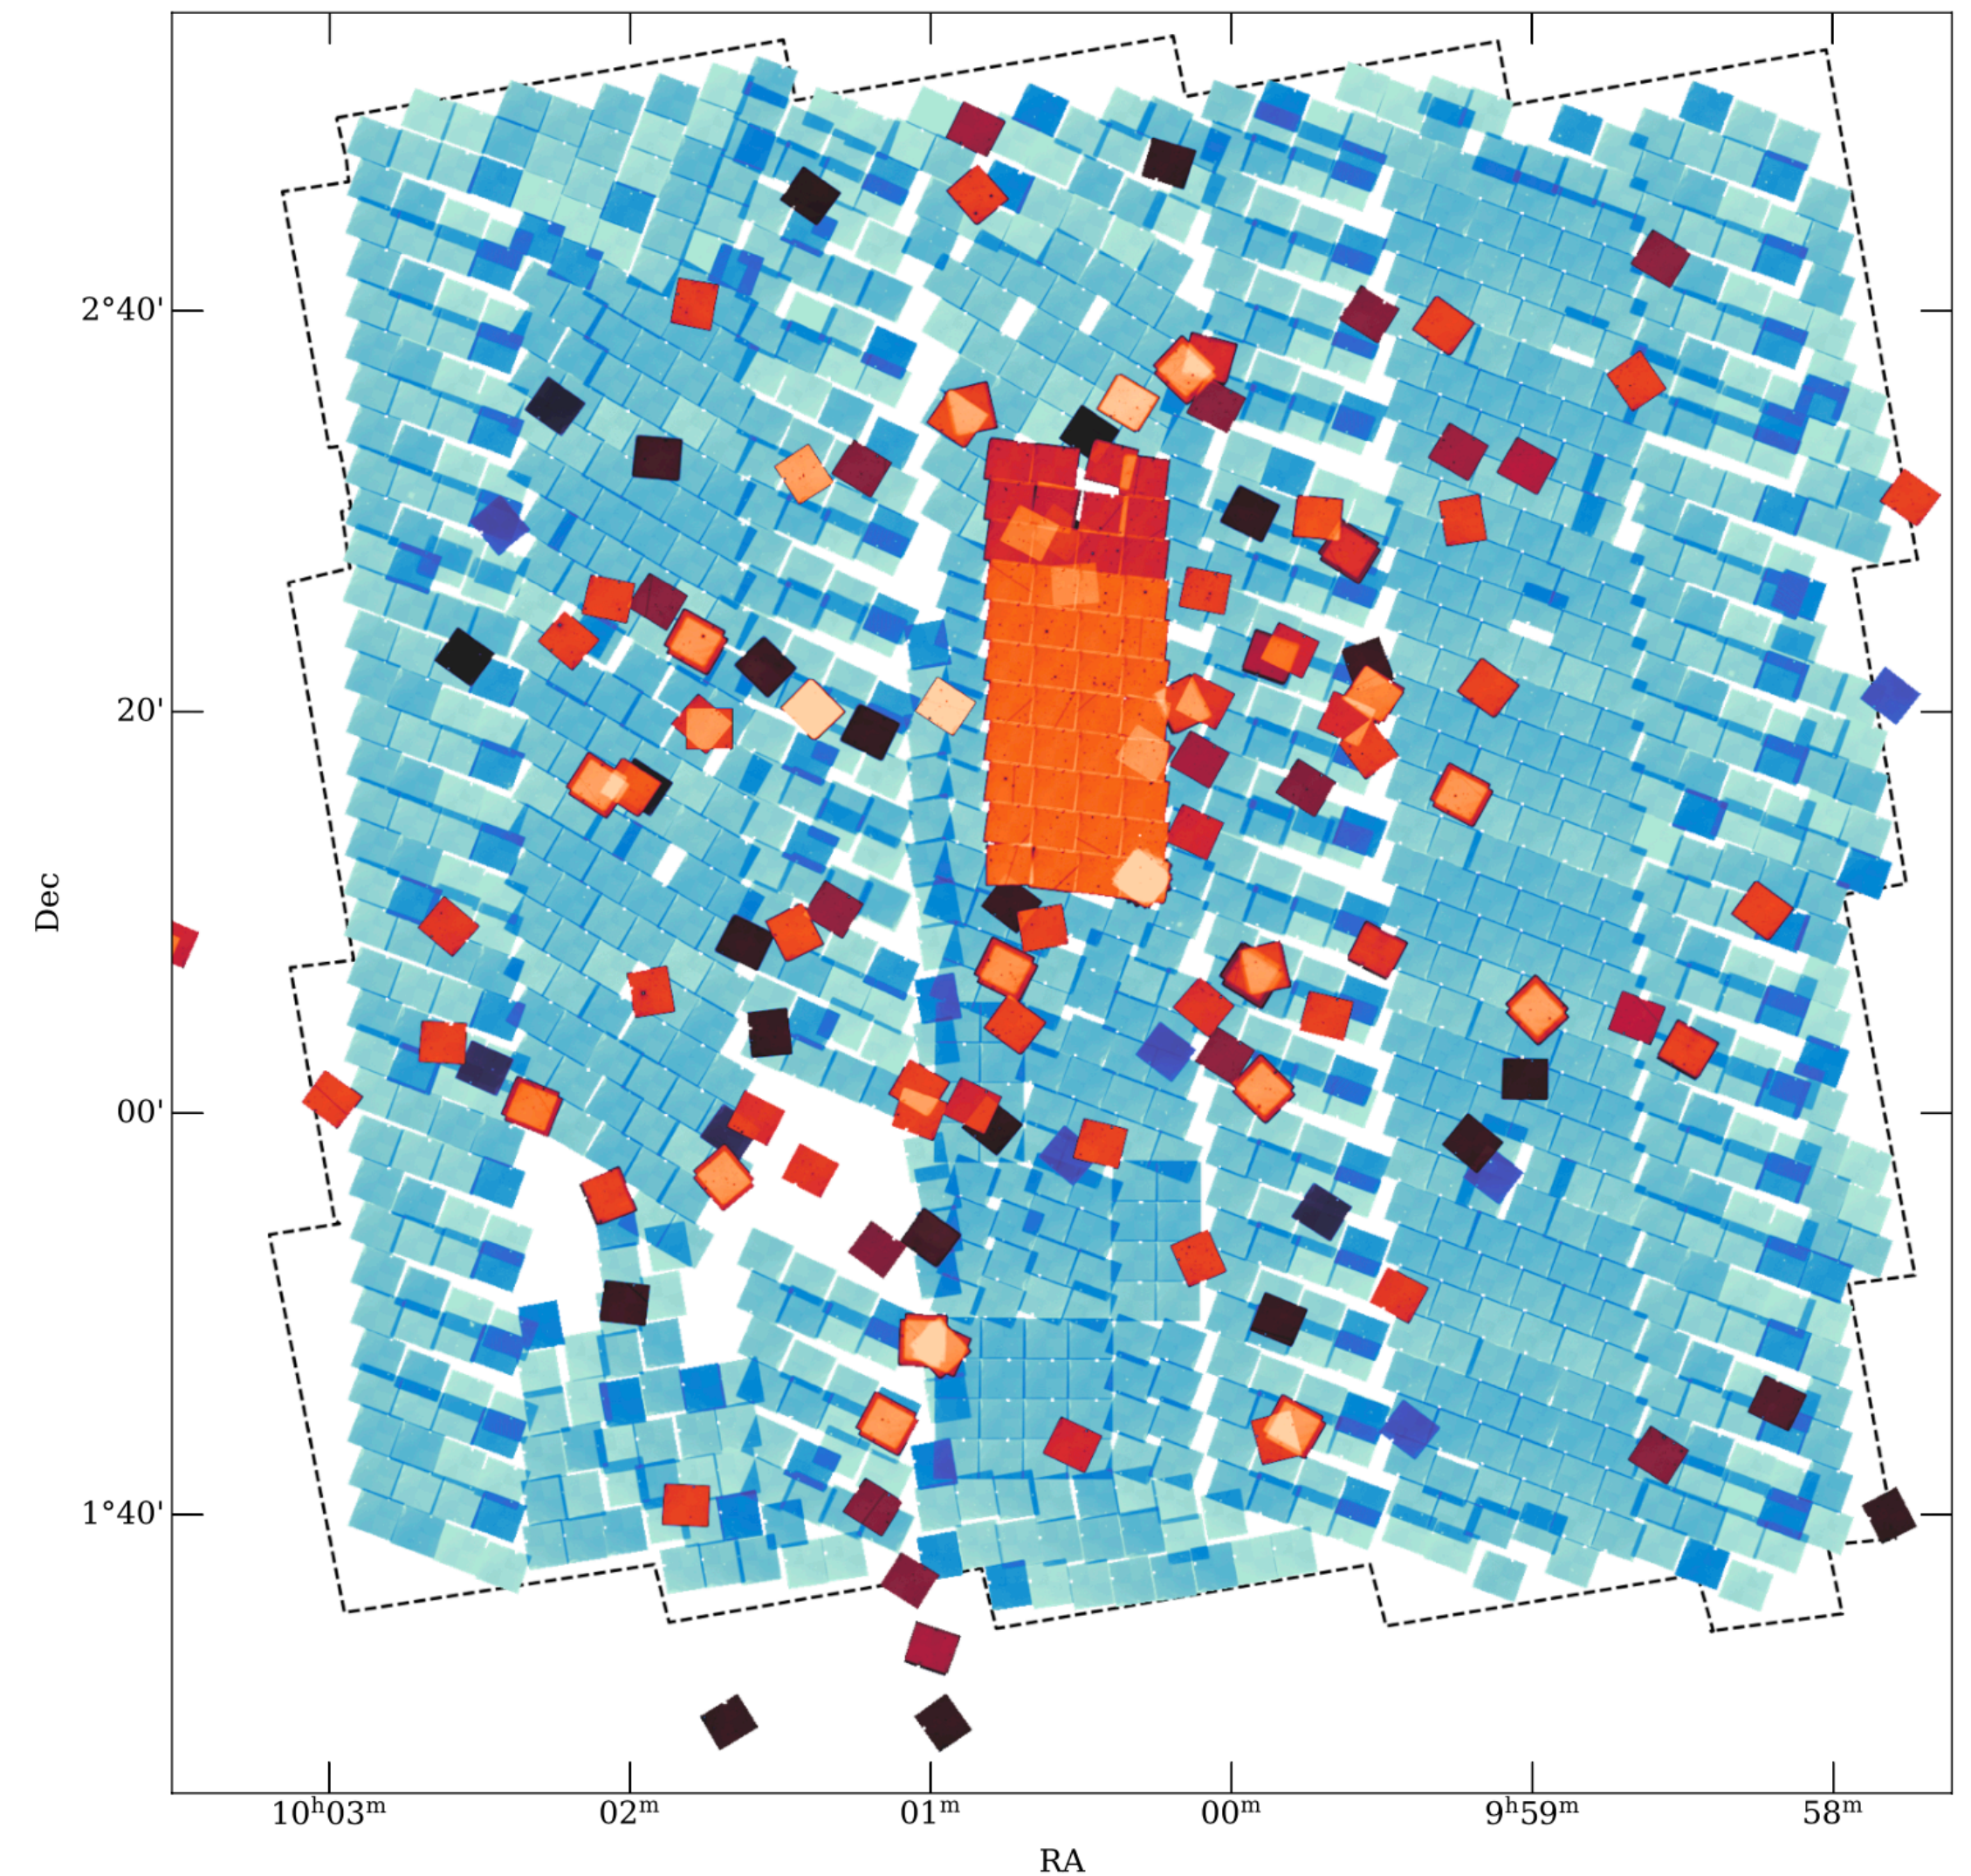

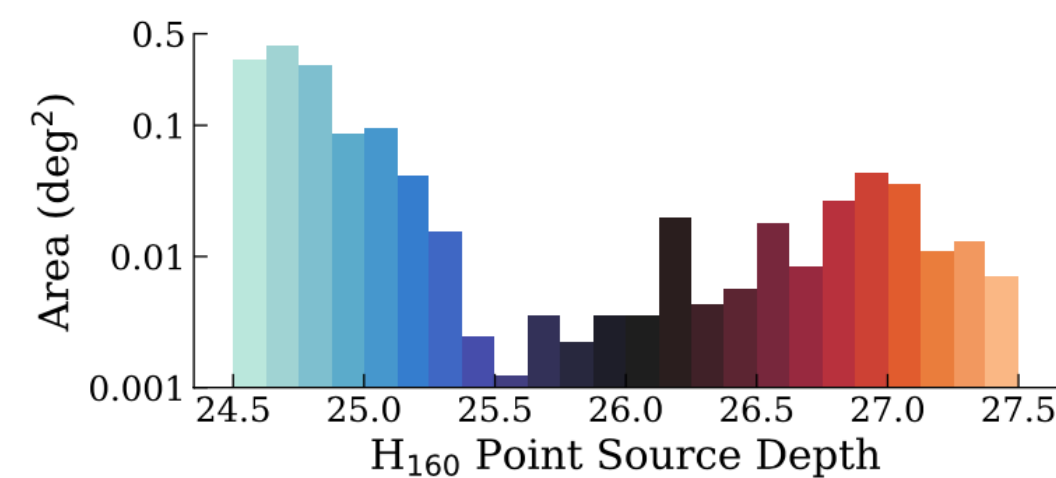

Mowla, Cutler, Brammer+ 22

Wide-Field Near-IR Imaging from 3D-DASH

Drift and SHift solves this problem

- 1.43 deg² in F160W (incl. archival data)
- 159 orbits, 1256 pointings
- Median 5 σ depth of 24.74 ABmag

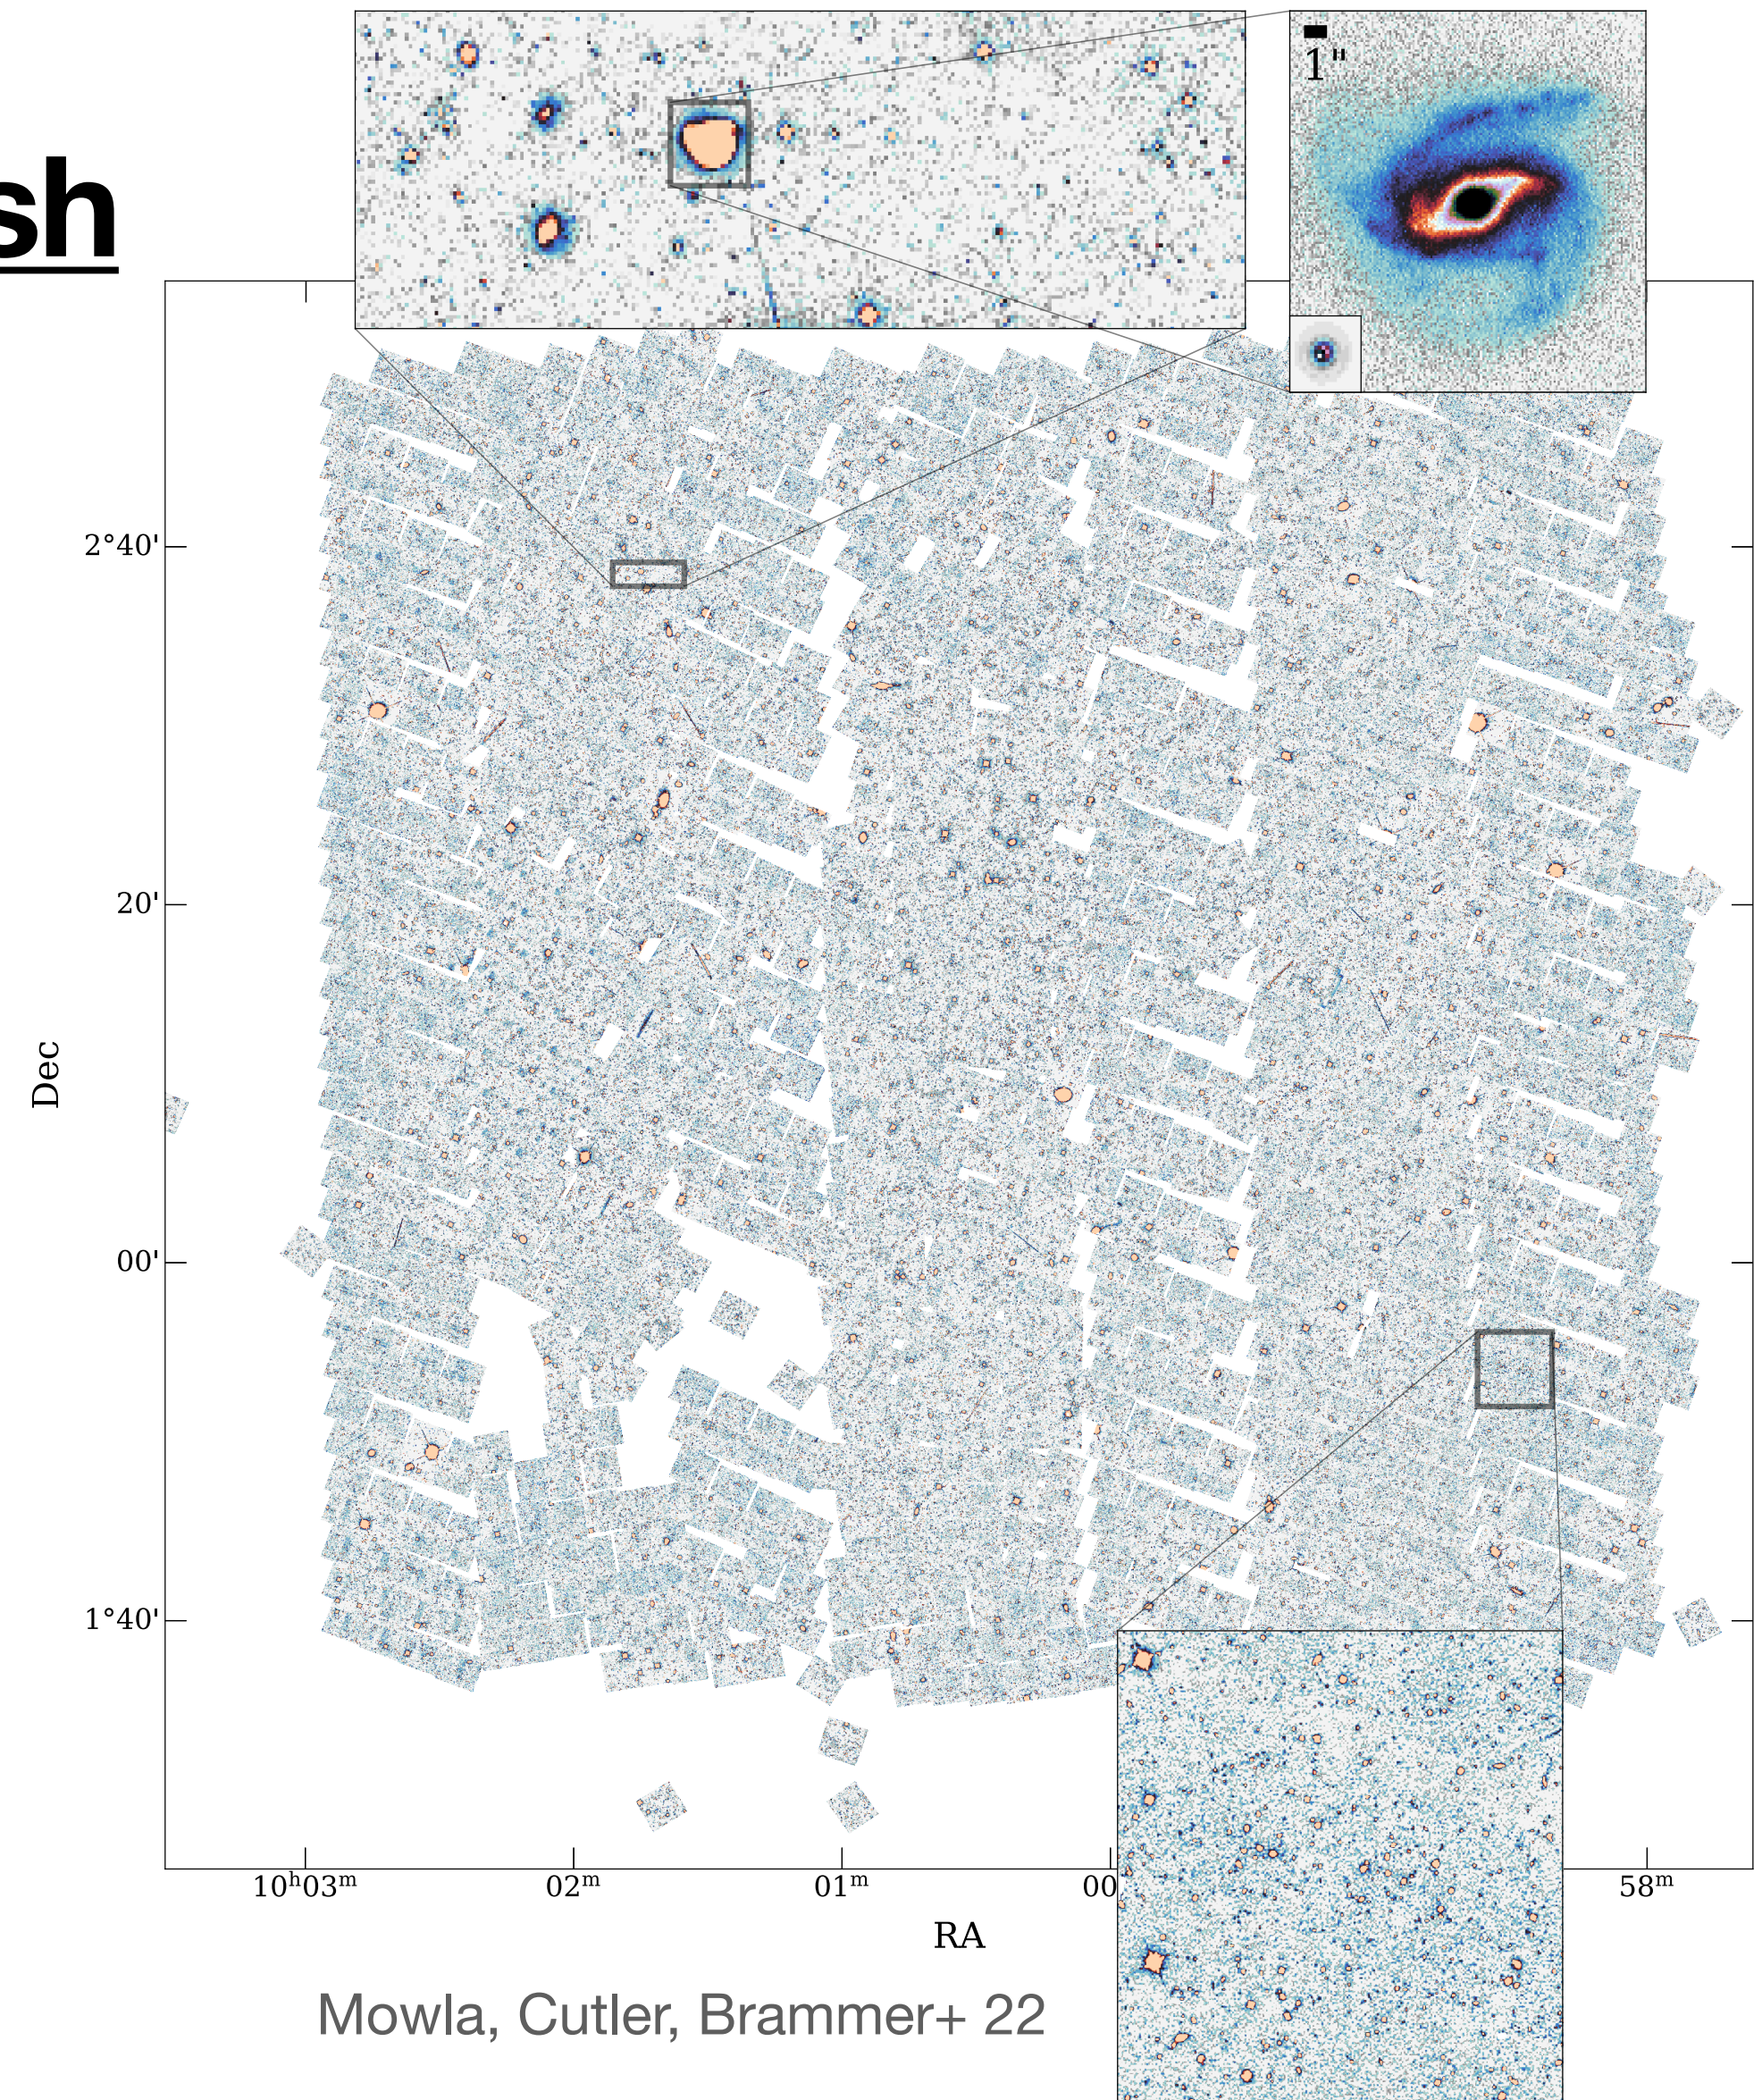

Wide-Field Near-IR Imaging from 3D-DASH

Now public!

<https://archive.stsci.edu/hlsp/3d-dash>

- Mosaics and individual tiles available on MAST

Wide-Field Near-IR Imaging from 3D-DASH

Now public!

<https://www.lamiyamowla.com/3d-dash>

- Mosaics and individual tiles available on MAST
- Image cutout tool and PSF generator available via Lamiya Mowla

Please make a duplicate of the notebook in order to make edits

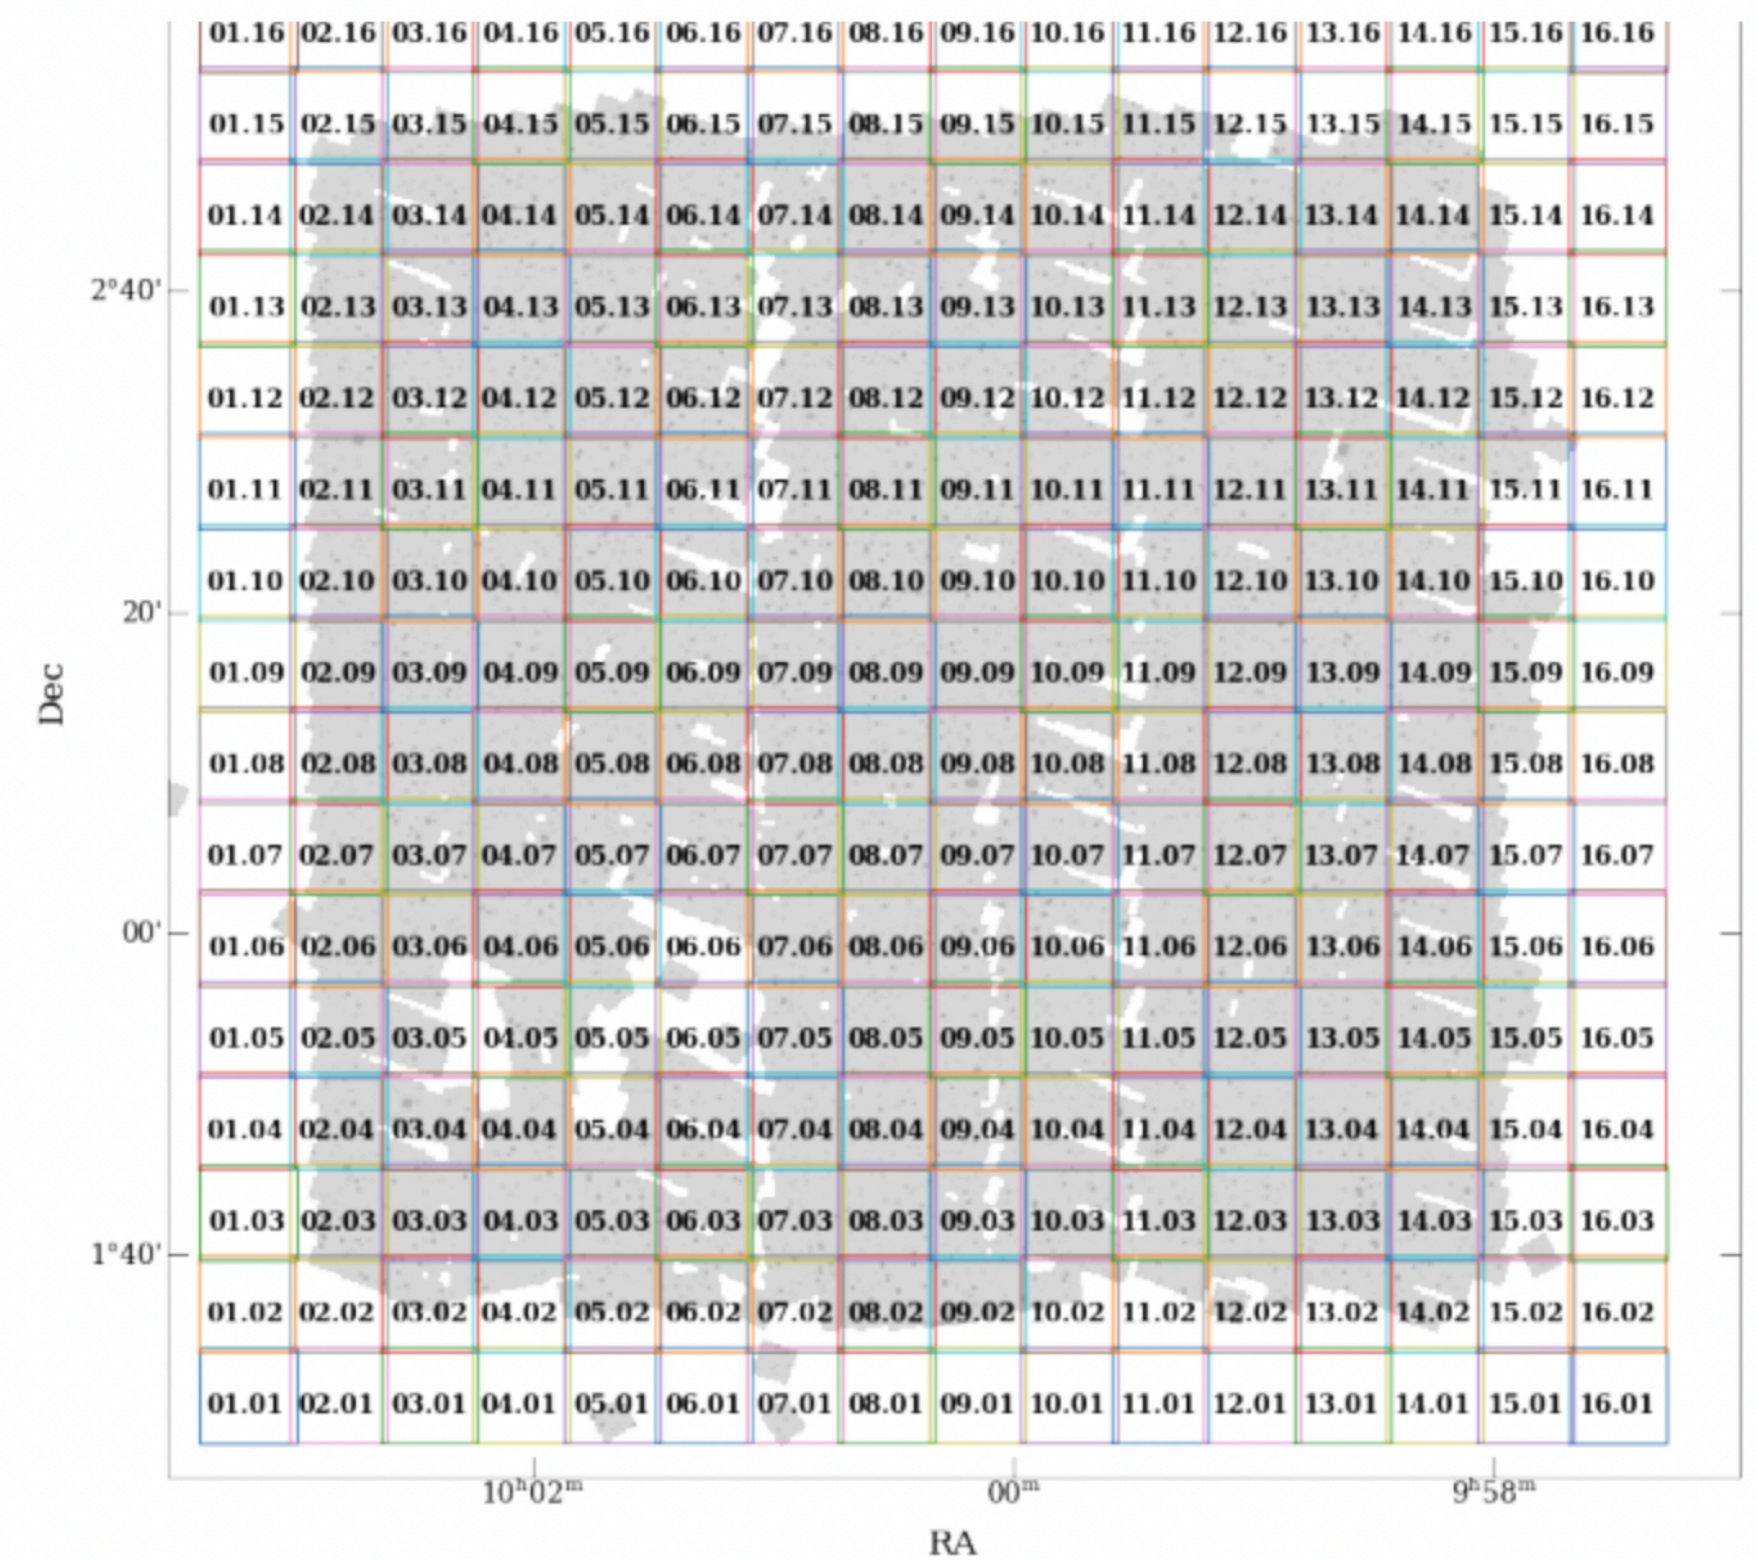

PSF generator for 3D-DASH data

```
from psf_generator_heroku import *
```

- ra - Target ra, degrees
- dec - Target dec, degrees
- nearest - nearest sources
- filter - Bandpass filter (f606w , f814w , f105w , f125w , f140w , f160w)
- extra_where - Additional query criteria, e.g., &extra_where= AND f160w_exptime>1000 (with leading space and no quote marks)
- window - Window function to taper edges
- require_source - Require that a source was identified in the image cutout
- use_weights - Use thumbnail weights when making average PSF.
- max_centroid_offset - Maximum centroid offset of identified source to use for average PSF
- max_nsrc - Maximum number of identified sources to consider as valid (e.g., with neighbors)
- recenter - Recenter data cutouts based on source centroids
- subtract_median - Subtract a median from the cutouts
- output - Output type: fits , png . Will be in the psf folder
- display - Display the generated PSF

Cutout

```
from dash_cutout import *
```

Lamiya Mowla, Gabe Brammer, 3D-DASH Team

Wide-Field Near-IR Imaging from 3D-DASH

- Mosaics and individual tiles available on MAST
- Image cutout tool and PSF generator available via Lamiya Mowla
- Interactive image explorer via Gabe Brammer

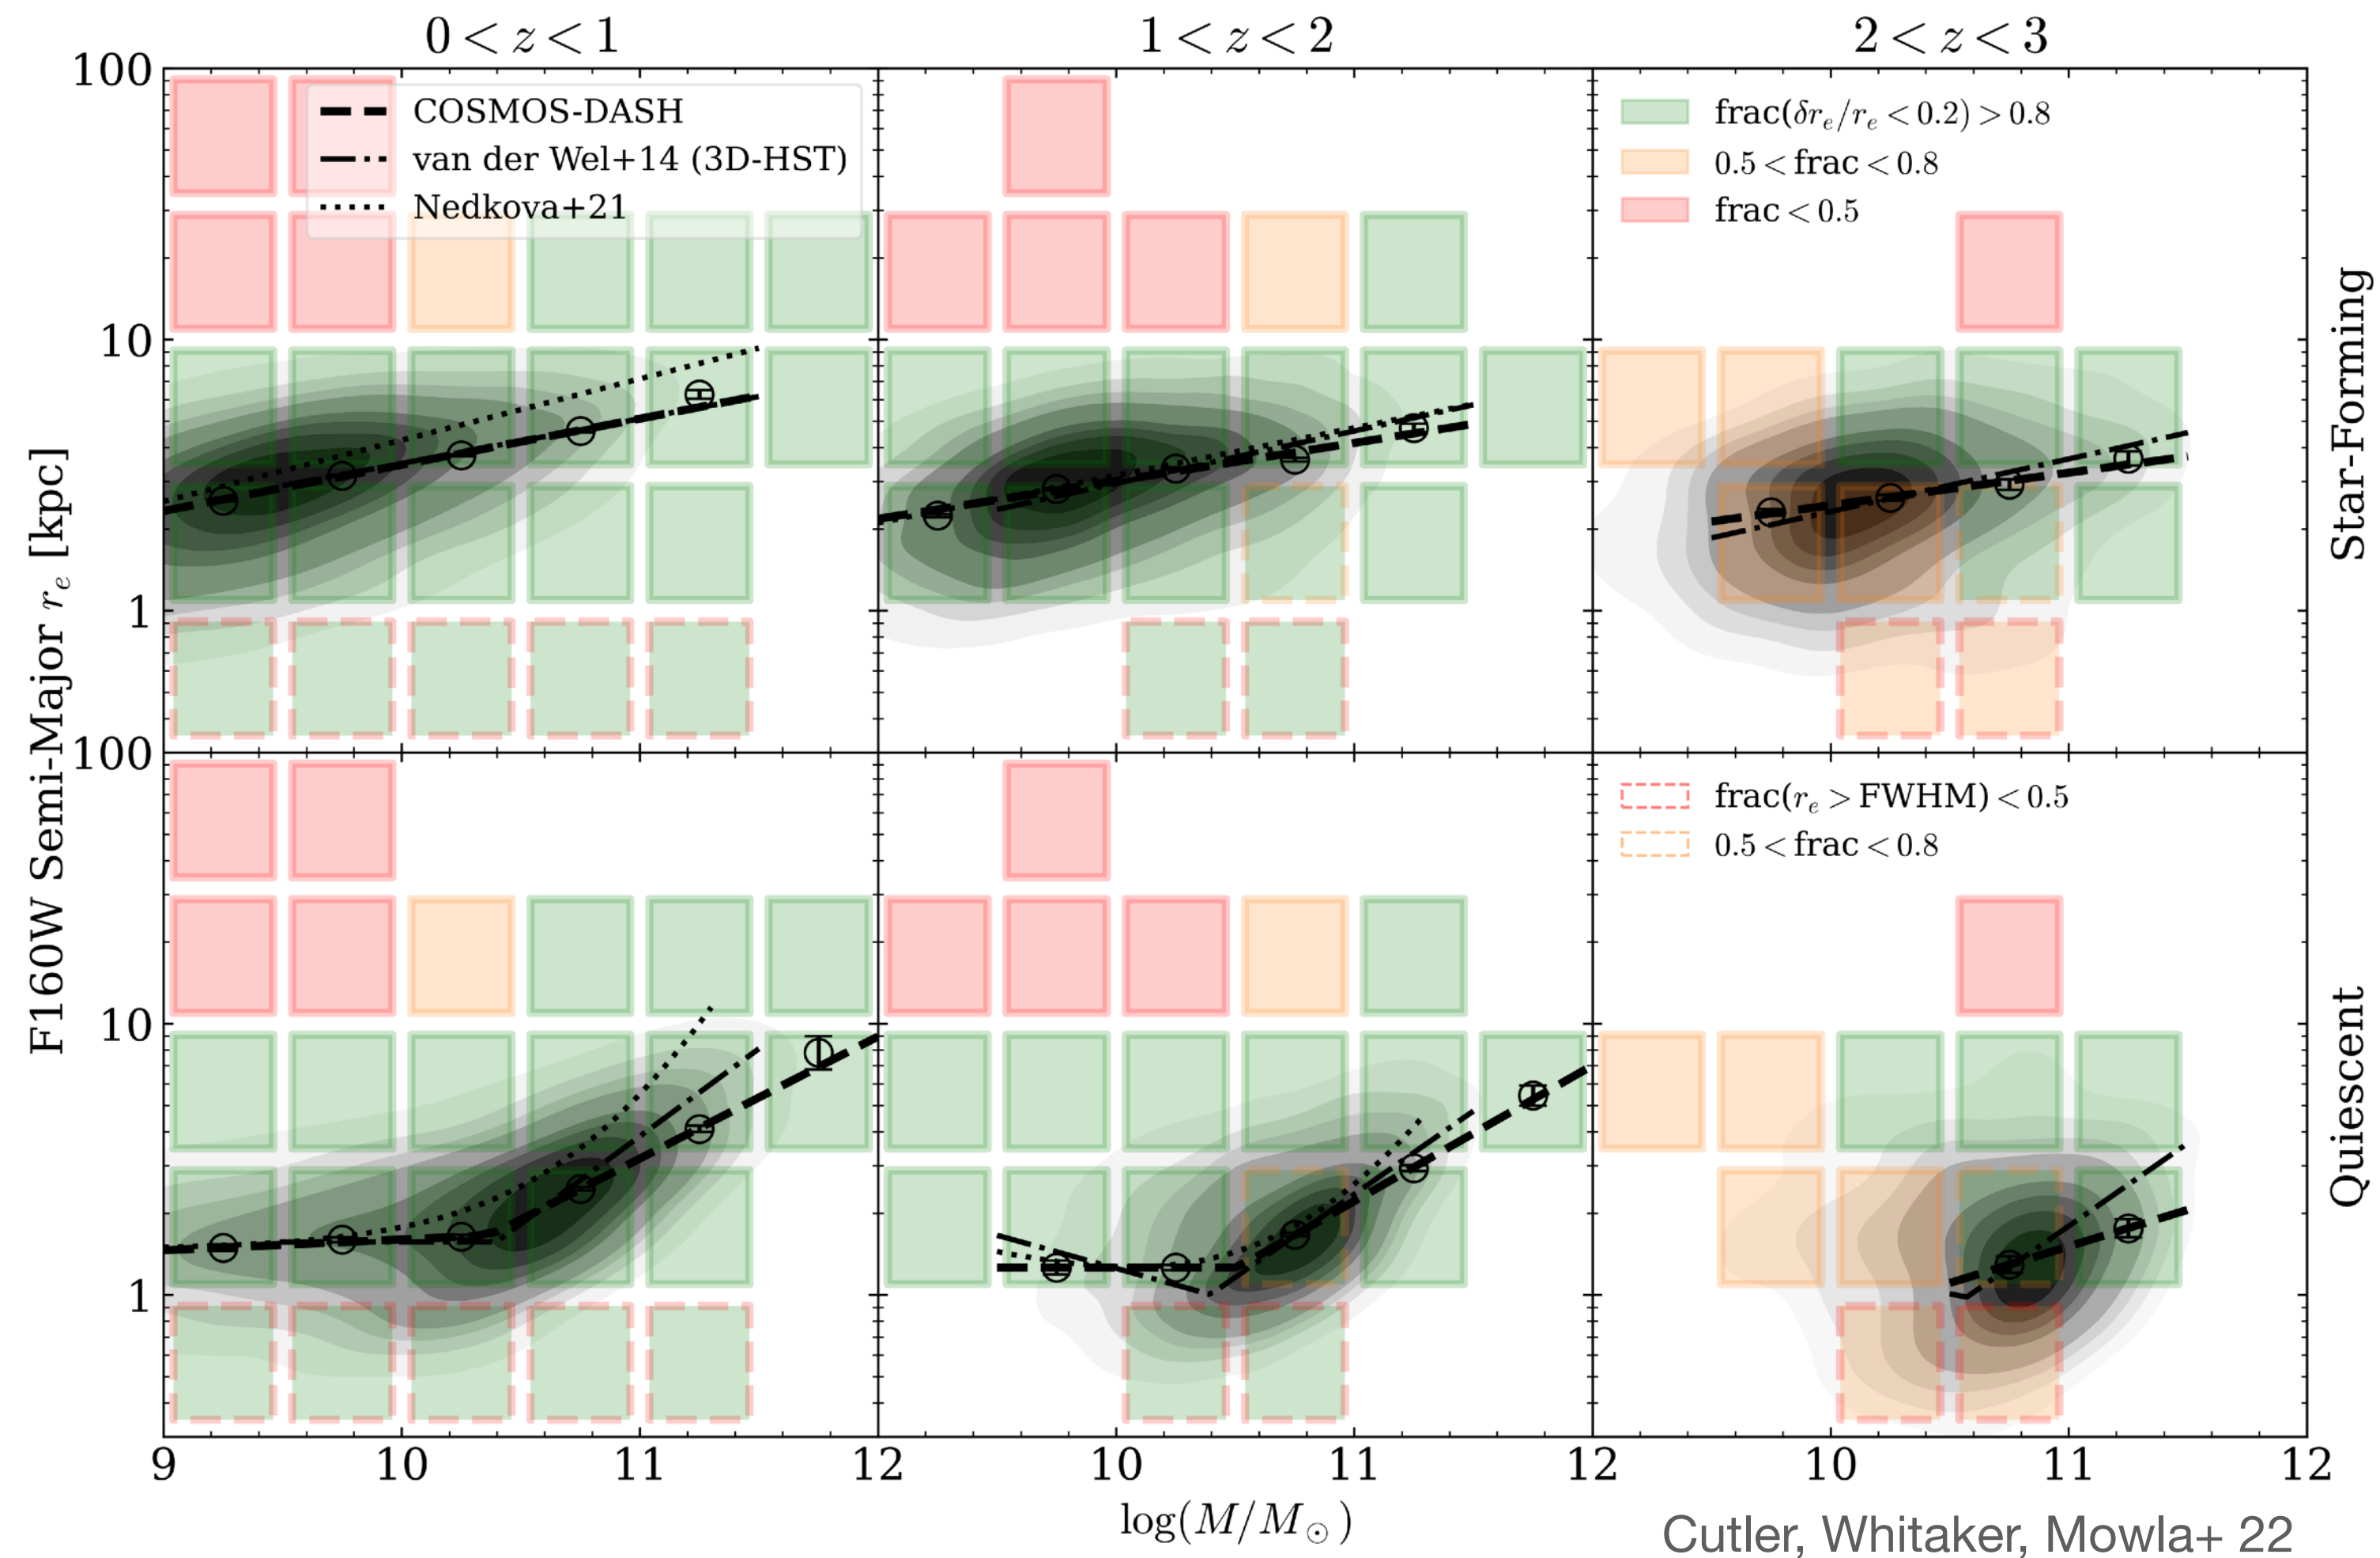

Wide-Field Near-IR Imaging from 3D-DASH

DASH morphologies agree with deeper CANDELS/3D-HST measurements

Wide-Field Near-IR Imaging from 3D-DASH

DASH preserves morphologies out to $z \sim 2$ and $\log(M) \sim 9$

Wide-Field Near-IR Imaging from 3D-DASH

COSMOS-DASH (3D-DASH pilot) Morphological catalog is public

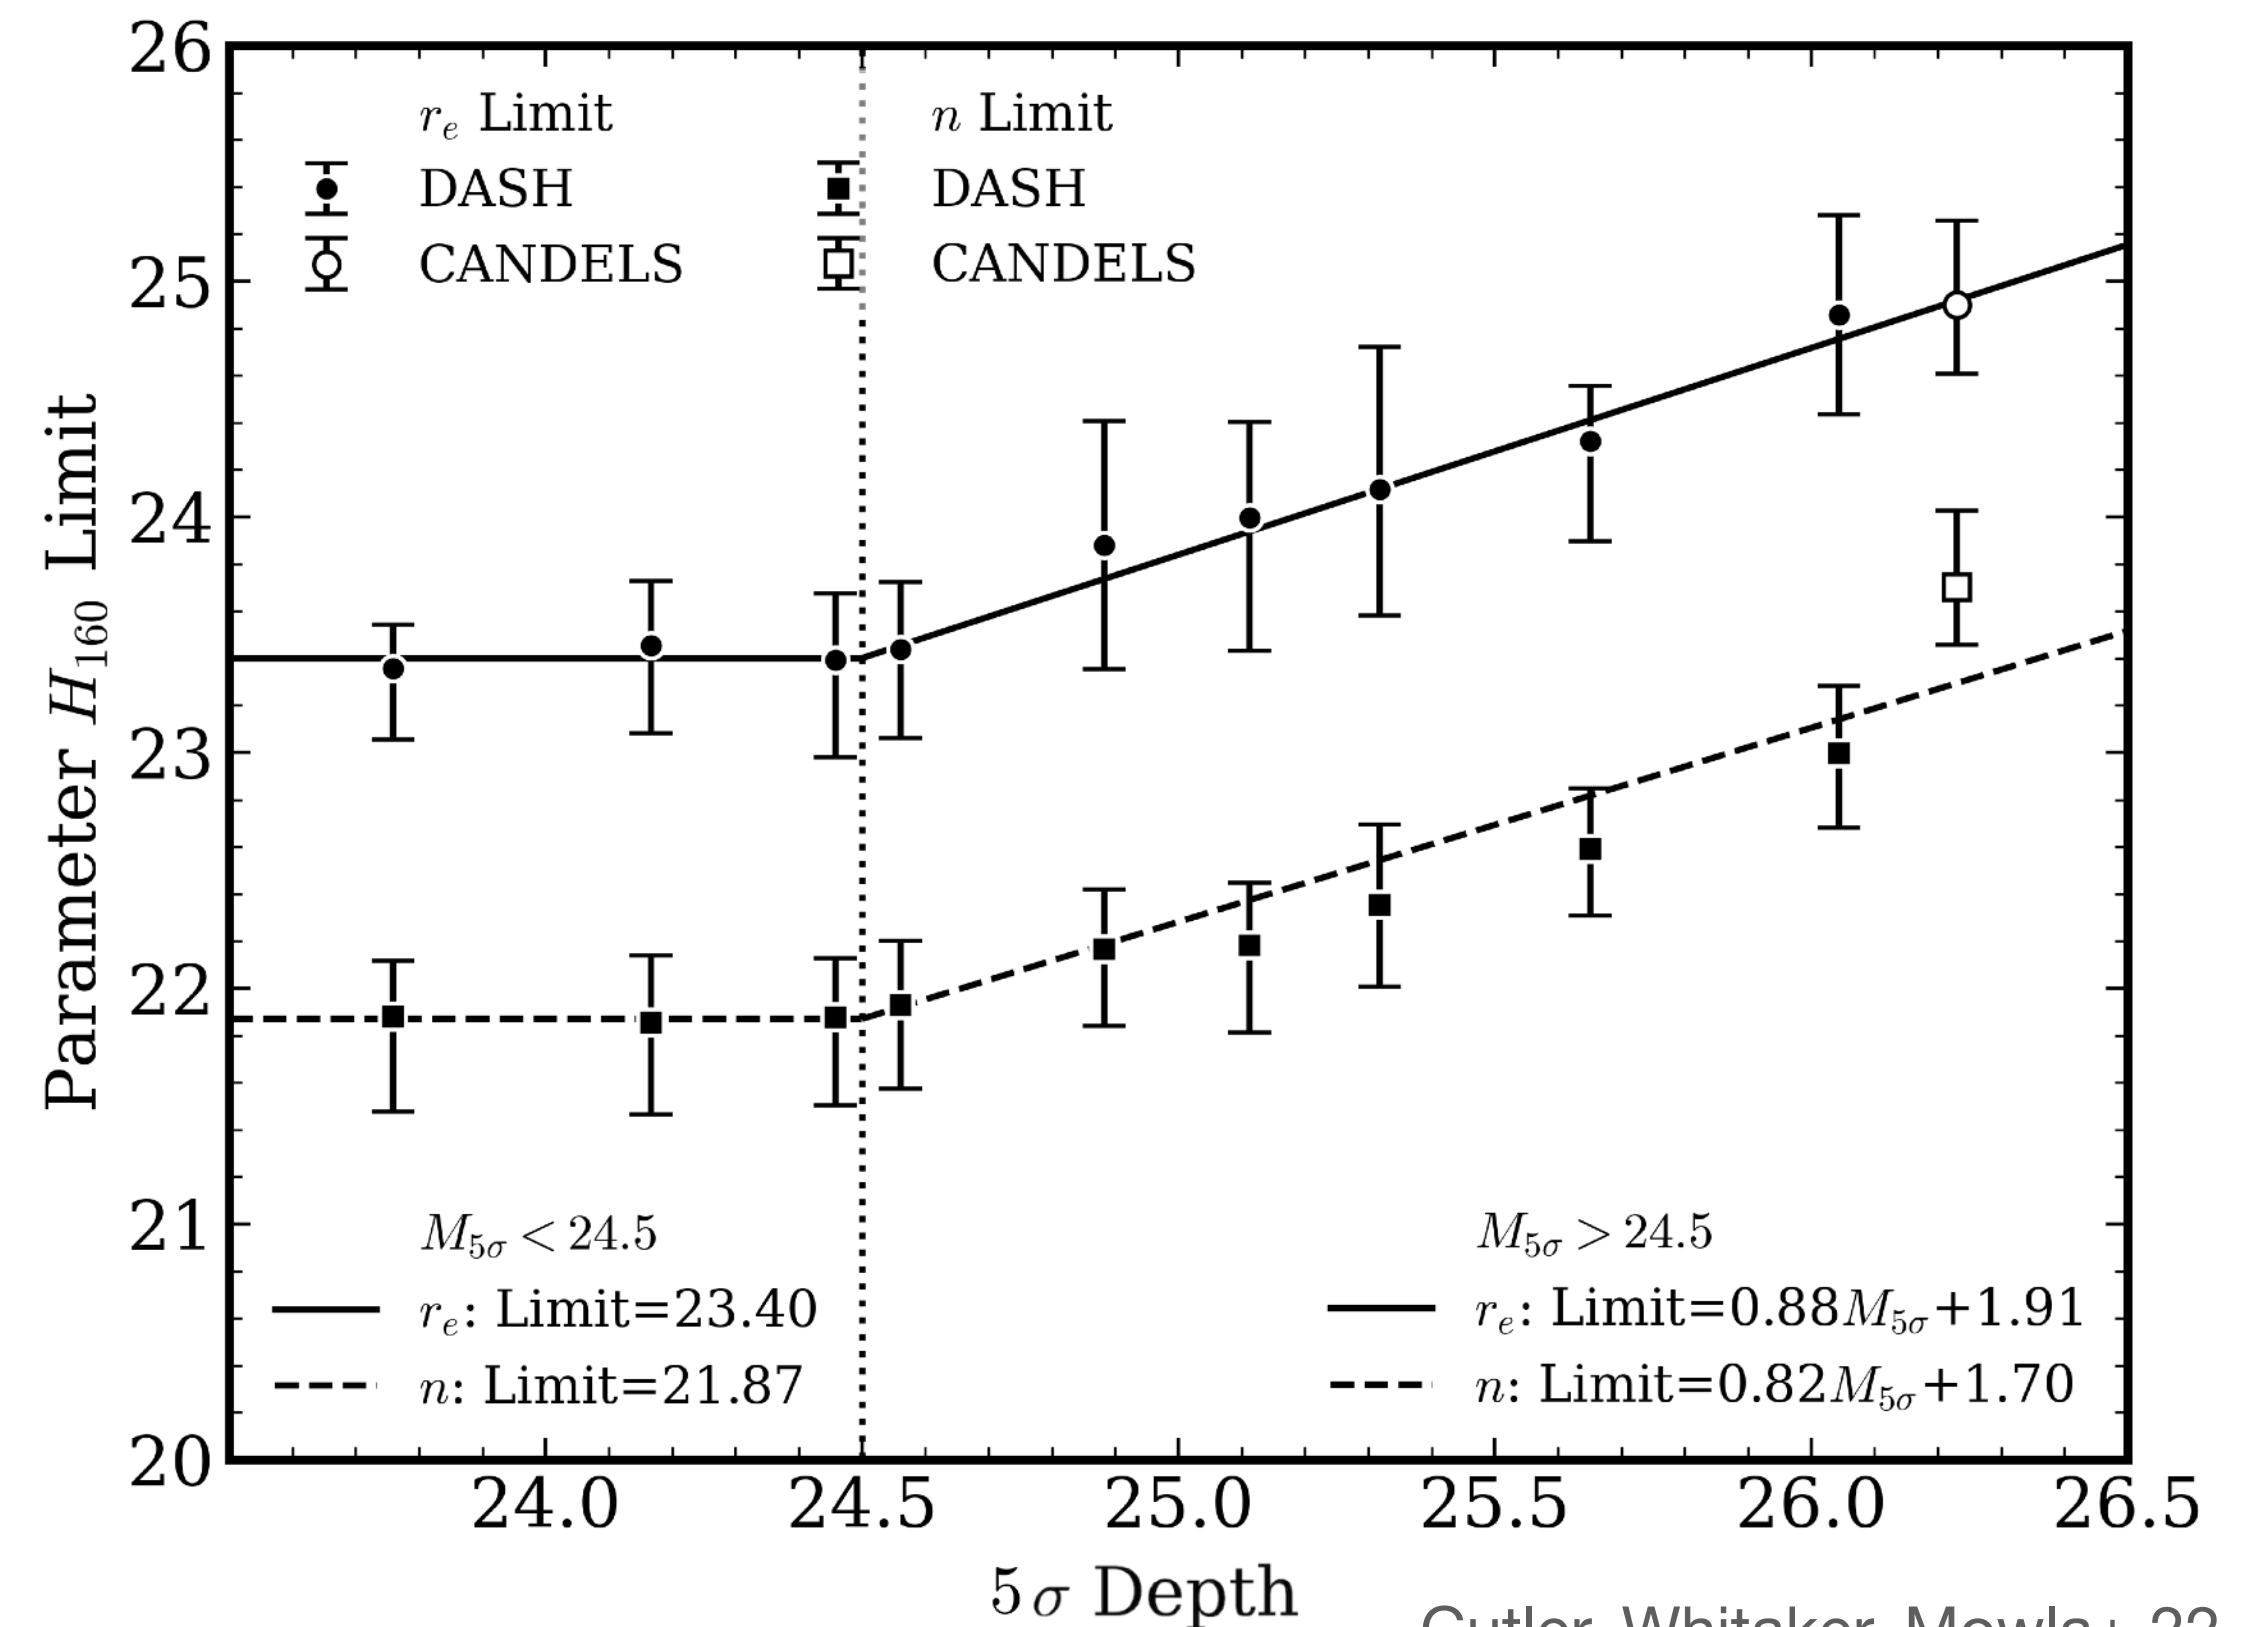

<https://archive.stsci.edu/hlsp/cosmos-dash>

MAST webpage: <https://archive.stsci.edu/hlsp/cosmos-dash>
 Refer to this HLSP with DOI: <https://doi.org/10.17909/T96Q5M>

2021-Nov-1

The catalog ([hlsp_cosmos-dash_hst_wfc3_cosmos_f160w_v1.3_morph-cat.txt](#)) contains the following columns:

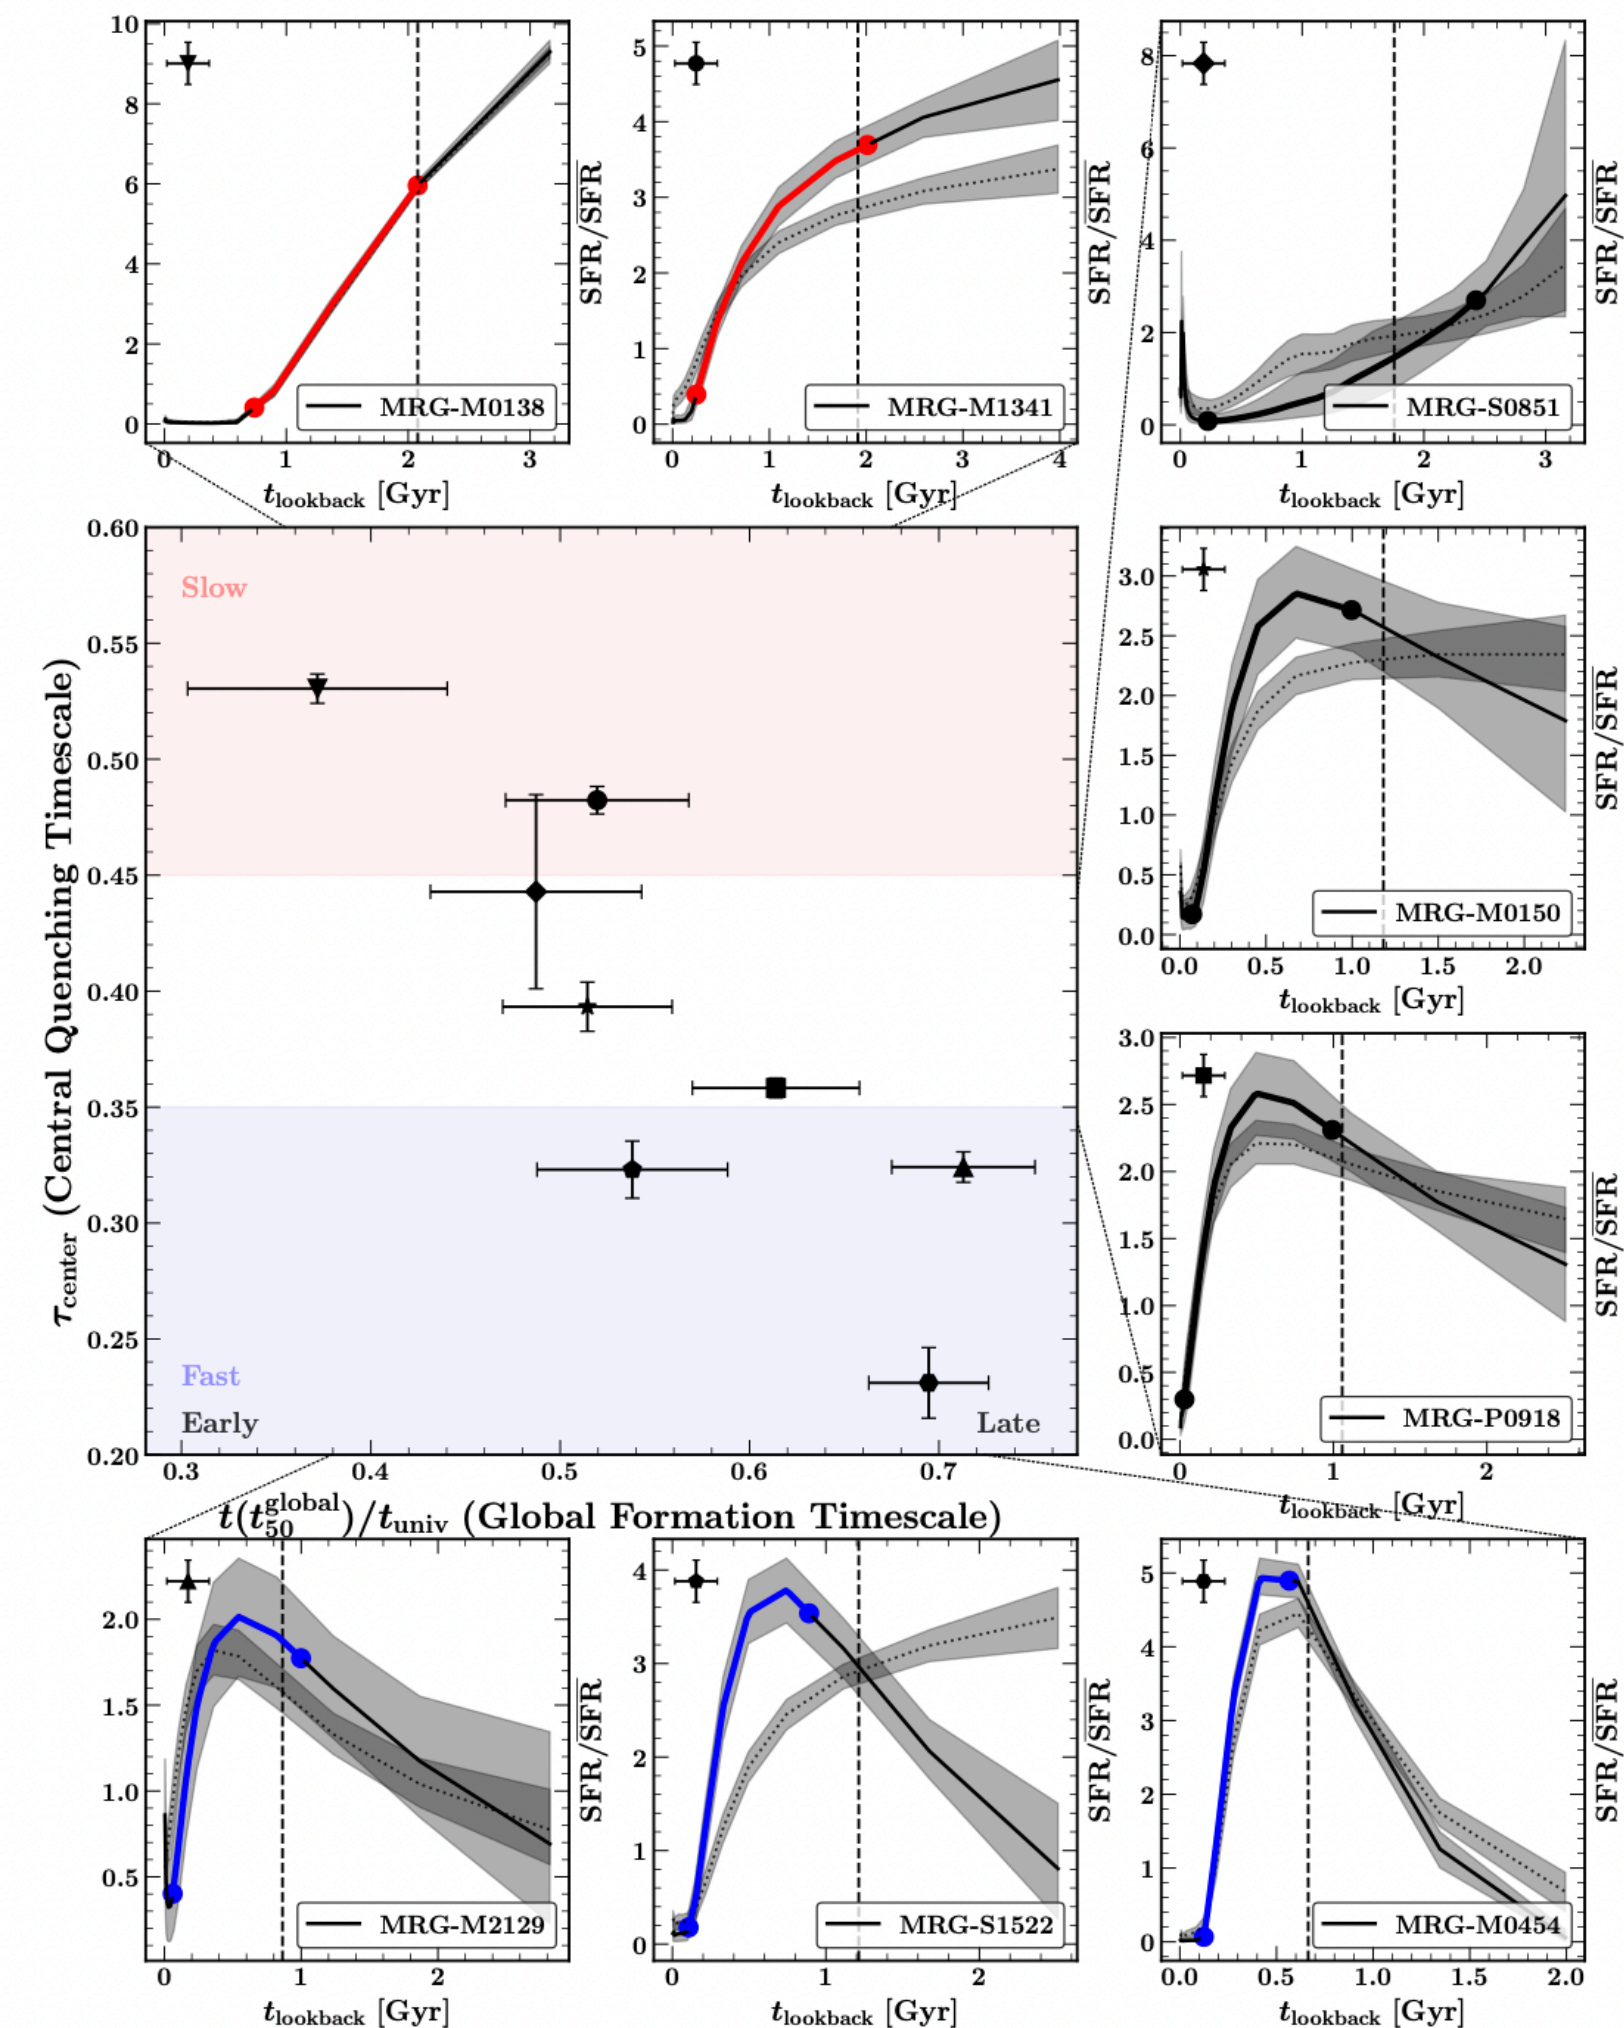

| COLUMN, | NAME, | DTYPE, | UNIT, | DESCRIPTION |
|-----------|-------|--------|---------|--|
| # COL 1, | ID, | int, | none, | Object identifier from UVISTA catalog of Muzzin et al. (2013) |
| # COL 2, | RA, | float, | deg, | Right ascension (J2000; decimal degrees) |
| # COL 3, | DEC, | float, | deg, | Declination (J2000; decimal degrees) |
| # COL 4, | flag, | int, | none, | GALFIT flag; 0=good, 1=suspicious, 2=bad, 3=failed, 4=no coverage (see Cutler et al. 2021) |
| # COL 5, | use, | int, | none, | General use flag; 1=GALFIT flag<2, re>FWHM, Deblending flag<2 (see Cutler et al. 2021) |
| # COL 6, | mag, | float, | ABmag, | GALFIT best-fit magnitude |
| # COL 7, | dmag, | float, | ABmag, | Uncertainty in GALFIT magnitude |
| # COL 8, | re, | float, | arcsec, | GALFIT best-fit effective (half-light) radius in arcsec |
| # COL 9, | dre, | float, | arcsec, | Uncertainty in GALFIT effective radius in arcsec |
| # COL 10, | n, | float, | none, | GALFIT best-fit Sersic index |
| # COL 11, | dn, | float, | none, | Uncertainty in GALFIT Sersic index |
| # COL 12, | q, | float, | none, | GALFIT best-fit axis ratio |
| # COL 13, | dq, | float, | none, | Uncertainty in GALFIT axis ratio |
| # COL 14, | pa, | float, | deg, | GALFIT best-fit position angle (0: North; 90: East) |
| # COL 15, | dpa, | float, | deg, | Uncertainty in GALFIT position angle |

Wide-Field Near-IR Imaging from 3D-DASH

Resolved quenched star-formation histories with 3D-DASH and COSMOS ACS (F814W) color gradients

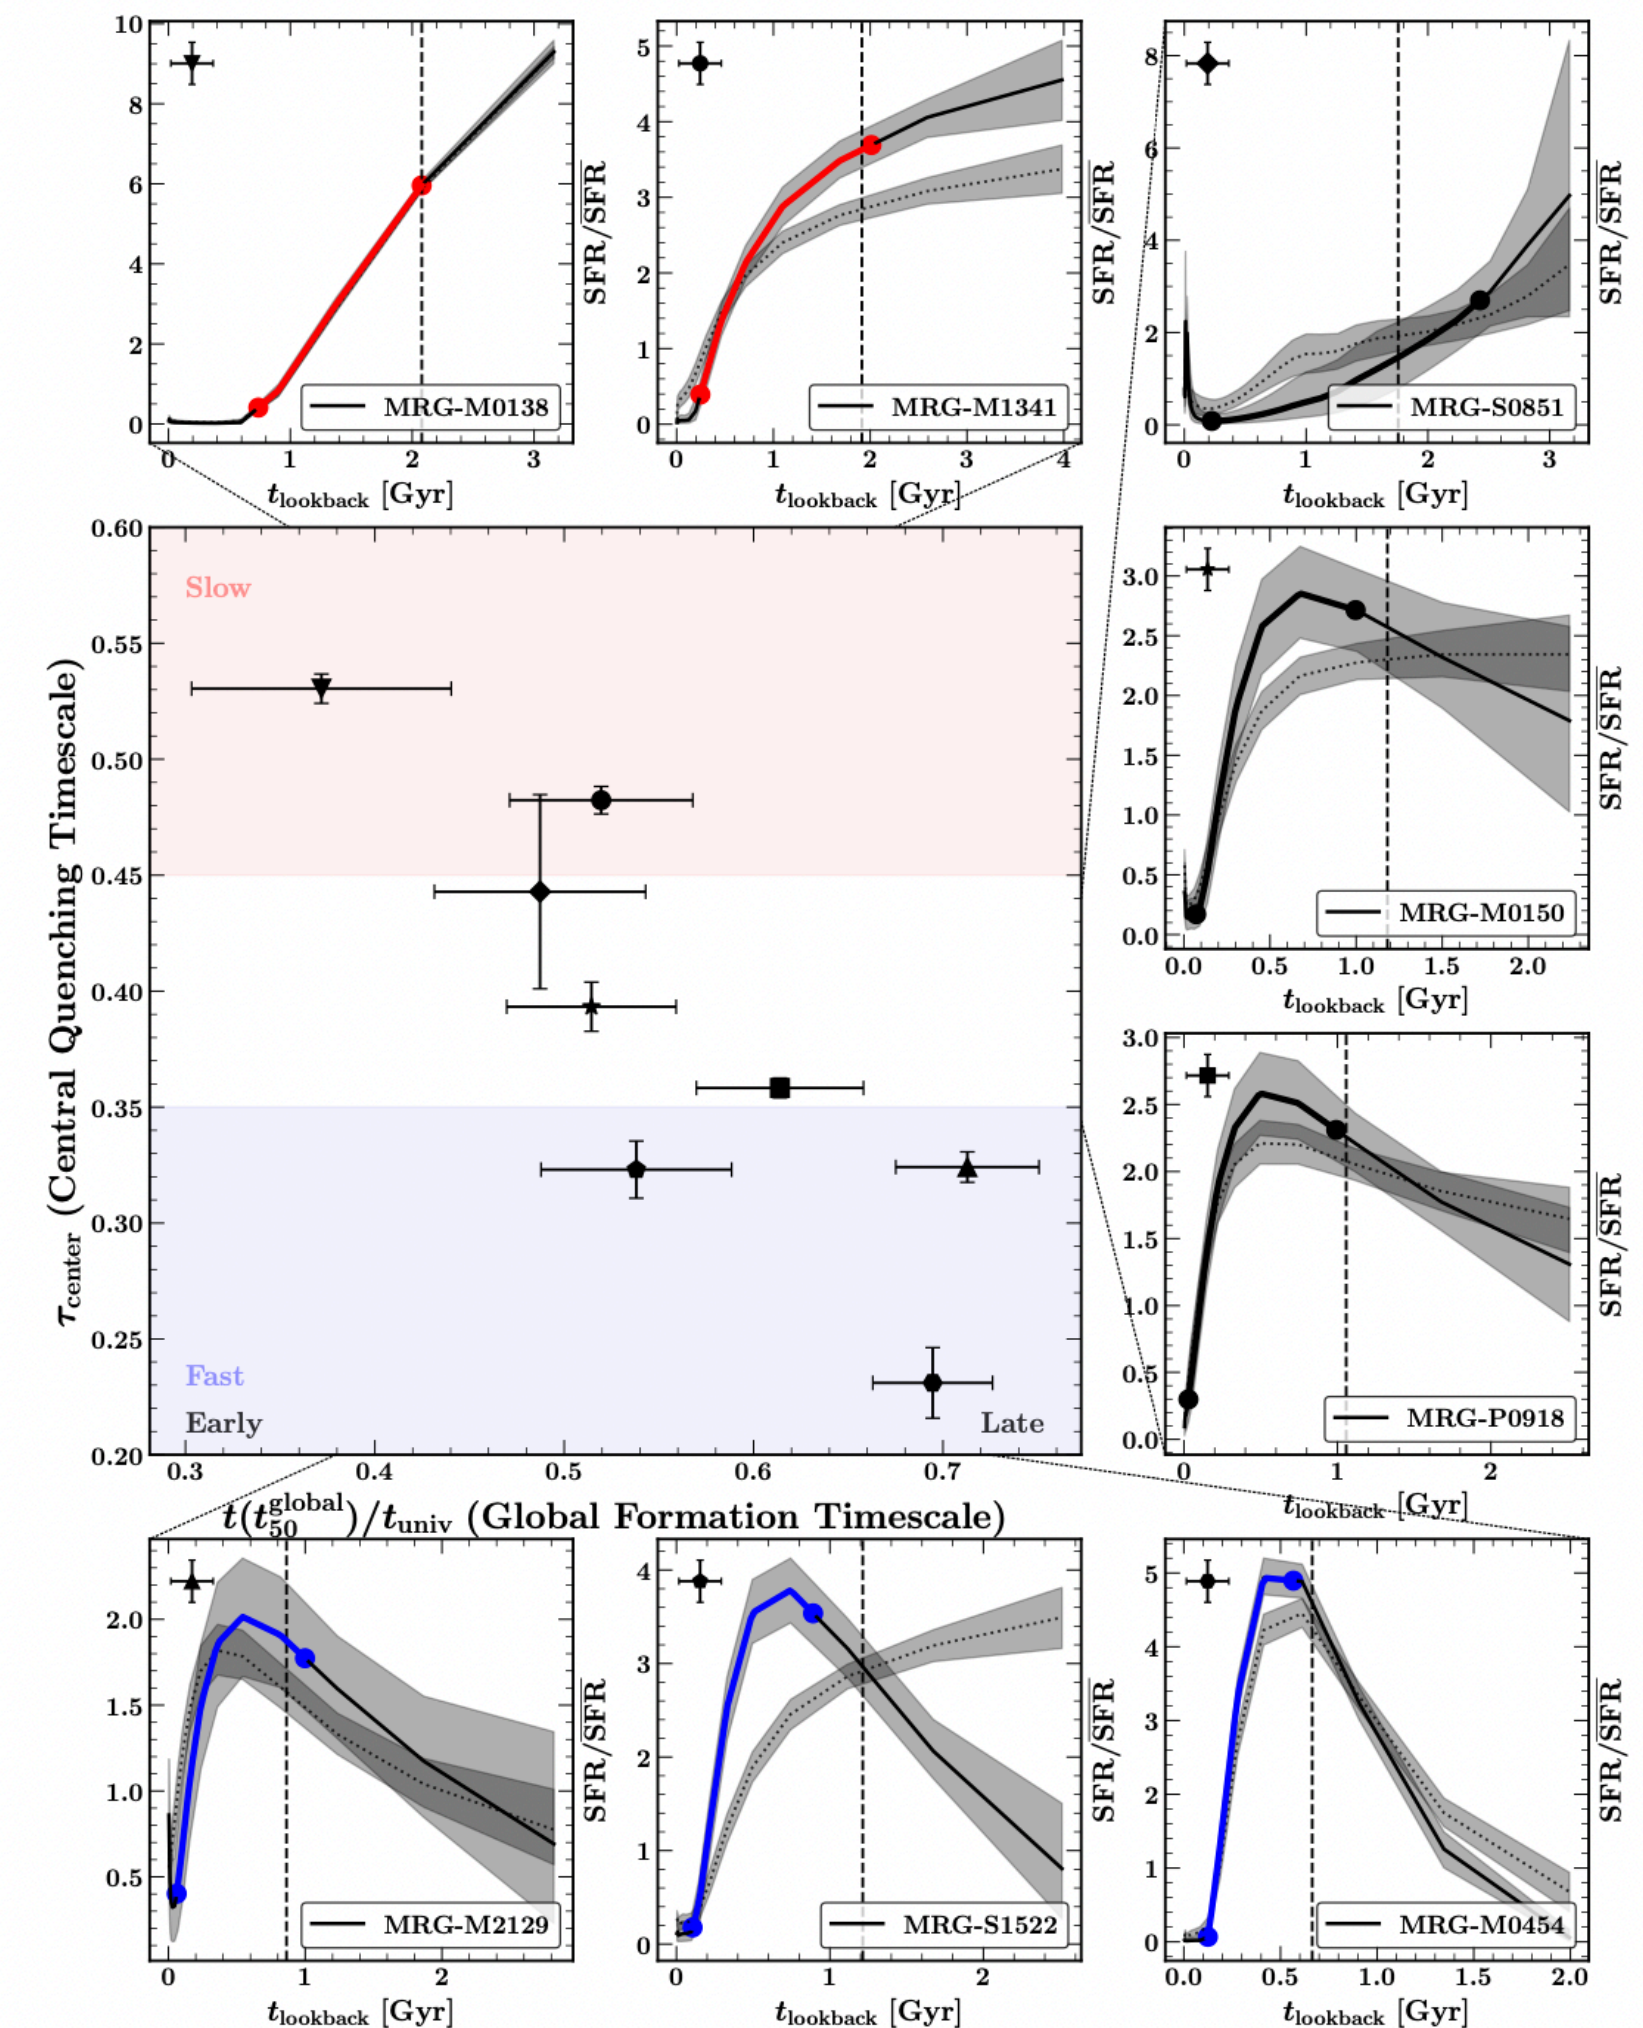

- The global formation time (t_{50}) describes whether a galaxy formed early or late
- The central quenching timescale (τ_{center}) describes whether a galaxy quenched quickly or slowly

Wide-Field Near-IR Imaging from 3D-DASH

Resolved quenched star-formation histories with 3D-DASH and COSMOS ACS (F814W) color gradients

1. Get grid of t_{50} and τ_{center} from REQUIEM SFHs
2. Generate model spectra with Prospector using SFHs and stellar population parameters
3. Mock observed $I_{F814W}-H_{F160W}$ color gradients from model spectra
4. Measure color gradients from 3D-DASH/COSMOS ACS

Wide-Field Near-IR Imaging from 3D-DASH

Summary

3D-DASH data is public:

- ▶ Mosaics and tiles at <https://archive.stsci.edu/hlsp/3d-dash>
- ▶ Image tools at <https://www.lamiyamowla.com/3d-dash>
- ▶ Morphologies at <https://archive.stsci.edu/hlsp/cosmos-dash>

Takeaways:

- ▶ The DASH technique allows HST to mosaic efficiently in the NIR
- ▶ DASH observations preserve galaxy morphologies
- ▶ Future studies into quiescent SFHs using color gradients
